

**BUSINESS INTELLIGENCE, RISK MANAGEMENT & SECURITY SERVICES**

## Traffic Management Officers

**Subrosa Group's SRG Security division delivers UK wide Traffic Management services to assist clients with permanent or temporary traffic control solutions.**

SRG Security traffic management support is delivered to various client requirements, whether it be a council waste management site, a construction site, filming location or a large size outdoor event. Our planning and consultancy is an essential component to the overall efficiency of the event whether it is short or long term. Traffic management aids in controlling and reducing risks, as well as improving traffic flow rates to and from events.

Working closely with our clients during early planning and strategy meetings, we consider the volume of traffic, pinch points and peak times for all entry and exit routes. Also considered are road layouts, Police, Council and Highways liaison. Once an operational plan is agreed experienced supervisors, traffic management officers, communications and other equipment is deployed.

### Services include

- Traffic Management maps and operational plans
- Installation of car park layouts
- Deploying CSAS Accredited Traffic Management Officers
- Road closure and diversion plans, signage and lights
- Site surveys and consultation
- Route planning advice
